*We relate to things and things relate to us. Emerging technologies do this in ways that are interesting and exciting, but often also inaccessible or invisible. In Relating to Things, leading design researchers and philosophers respond to issues raised by this situation - inquiring into what it means to live with and relate to things that can actively relate to us, and that relate to each other in ways that do not involve us at all. Case studies include Amazon's Alexa, the Internet of Things, Pokémon Go and Roomba the robot vacuum cleaner. Authors explore everything from the care work undertaken by objects, reciprocal human/machine learning, technological mediation as a form of control, and what it takes to reveal things that tend to be hidden and that often (by design) conceal the ways in which they use us. As a whole, the book is a collaborative philosophical inquiry into the nature and consequences of contemporary technological things. It is a design inquiry into the current nature of the artificial, and possibilities for how things might be otherwise.*

This volume presents the results of the Neural Information Processing Systems Competition track at the 2018 NeurIPS conference. The competition follows the same format as the 2017 competition track for NIPS. Out of 21 submitted proposals, eight competition proposals were selected, spanning the area of Robotics, Health, Computer Vision, Natural Language Processing, Systems and Physics.

Competitions have become an integral part of advancing state-of-the-art in artificial intelligence (AI). They exhibit one important difference to benchmarks: Competitions test a system end-to-end rather than evaluating only a single component; they assess the practicability of an algorithmic solution in addition to assessing feasibility. The eight run competitions aim at advancing the state of the art in deep reinforcement learning, adversarial learning, and auto machine learning, among others, including new applications for intelligent agents in gaming and conversational settings, energy physics, and prosthetics.

and recognized throughout the field, were based on cognitive psychology (study of mental processes such as problem solving, memory, and language), and early practitioners were well informed of its tenets. But today practitioners with backgrounds in cognitive psychology are a minority, as user interface designers and developers enter the field from a wide array of disciplines. HCI practitioners today have enough experience in UI design that they have been exposed to UI design rules, but it is essential that they understand the psychological basis behind the rules in order to effectively apply them. In *Designing with the Mind in Mind*, best-selling author Jeff Johnson provides designers with just enough background in perceptual and cognitive psychology that UI design guidelines make intuitive sense rather than being just a list of rules to follow. Provides an essential source for user interface design rules and how, when, and why to apply them Arms designers with the science behind each design rule, allowing them to make informed decisions in projects, and to explain those decisions to others Equips readers with the knowledge to make educated tradeoffs between competing rules, project deadlines, and budget pressures Completely updated and revised, including additional coverage in such areas as persuasion, cognitive economics and decision making, emotions, trust, habit formation, and speech UIs

Part 2 is highly visual and provides a glance onto a sound designer's workbench and the current state of "Sonic Labor." Part 3 uses cultural analysis to explore our contemporary "Living with Sounds." The final and fourth part then proposes a series of anthropological and political interpretations of how "Sound Works" today. This book is not a manual on sound design; it instead argues for a cultural theory of sound design for sound designers and sound artists, for clients who commission a sound design and for researchers in the fields of sound studies, design research, and cultural studies*
