A combination of the best of aquaculture and hydroponics, aquaponic gardening is an amazingly productive way to grow organic vegetables, greens, herbs and fruits, while providing the added benefits of fresh fish as a safe, healthy source of protein. On a larger scale, it is a key solution to mitigating food insecurity, climate change, groundwater pollution and the impacts of overfishing on our oceans. Aquaponics systems are completely organic. They are four to six times more productive and use 90 percent less water than conventional gardens. Other advantages include no weeds, fewer pests, and no watering, fertilising, bending, digging, or heavy lifting - in fact, there really is no down side! Have you ever wished that you could garden and farm, but found that you didn't have the space to do so? Did you ever feel like you wanted to be able to grow your own food, but felt like the climate that you lived in was all wrong? Did you think that maybe, you didn't have the time to keep everything alive? Well, think again--you can not only grow your own garden, but you can also farm your own fish, and you can do it all within a single system. Aquaponics is the cultivation of fish and plants using symbiosis to keep them both alive. The fish produce waste, which gets converted by bacteria into the nutrients that plants need to survive. Those nutrients get taken in by the plants, giving them everything that they will need to grow while also cleaning out the water that the fish are living in. It works both ways--the fish's home stays clean, and the plant is kept well-nourished. This symbiotic relationship is used heavily in the aquaponic setting. In these setups, the fish are in one system, usually grown to farm as food as well. They are kept in what is known as a rearing tank, which keeps them all together and away from damaging the roots. The plants are then kept in a hydroponic build--a setup that allows them to grow entirely soil-free. You can grow this with ease, and doing so will help create larger yields than you thought was possible. Within this book, you will be introduced to this concept and how to make it your own. You will learn how to balance the needs of your fish and plants to keep them both alive and healthy, and you will be guided through how to begin farming your own with ease. In particular, you will find: Why you should begin using an aquaponic system How fish and plants can keep each other alive through the nitrogen cycle, and what that nitrogen cycle has to do with aquaponics A list of all of the supplies and components that you are likely to require How to build an aquaponic setup How to keep your fish alive and take care of them How to keep and care for your plants Finding that balancing point between fish and plant to ensure perfect parameters A list of several common plants that are great for beginners A list of several common fish that are great for beginners A guide to the common problems your system will face How to troubleshoot your system Beginner's mistakes that you can avoid to up your chances of success **AND MORE Do you wish that you could grow your own plants the way that you want to without having to worry about unpredictable weather, disease, or weeds?
