cries of the children whose triumphs and tragedies sustain the families that live there. As each neighbour adapts to the newcomers in different ways, the children fill their days with cricket matches, romantic crushes, and small rivalries. But when the tides of civil war begin to turn towards the neighbourhood, their differences ignite in ways no one could have imagined. As the stability of their neighborhood is threatened by clashing political beliefs and prejudices, the children of the community are forced to

*Veronica Franco (whose life is featured in the motion picture Dangerous Beauty) was a sixteenth-century Venetian beauty, poet, and profeminist. This collection captures the frank eroticism and impressive eloquence that set her apart from the chaste, silent woman prescribed by Renaissance gender ideology. As an "honored courtesan", Franco made her living by arranging to have sexual relations, for a high fee, with the elite of Venice and the many travelers—merchants, ambassadors, even kings—who passed through the city. Courtesans needed to be beautiful, sophisticated in their dress and manners, and elegant, cultivated*

The textual foundations of works of great cultural significance are often less stable than one would wish them to be. No work of Homer, Dante or Shakespeare survives in utterly reliable witnesses, be they papyri, manuscripts or printed editions. Notions of textual authority have varied considerably across the ages under the influence of

different (and differently motivated) agents, such as scribes, annotators, editors, correctors, grammarians, printers and publishers, over and above the authors themselves. The need for preserving the written legacy of peoples and nations as faithfully as possible has always been counterbalanced by a duty to ensure its accessibility to successive generations at different times and in different cultural contexts. The ten chapters collected in this volume offer critical approaches to such authors and texts as Homer, the Bible, The Thousand and One Nights, Dante, Montaigne,

Shakespeare, Eliot, but also Leonardo da Vinci's manuscripts uniquely combining word and image, as well as Beethoven's 'Tempest' sonata (Op. 31, No. 2) as seen from the angle of music as text. Together the contributors argue that an awareness of what the 'life of texts' entails is essential for a critical understanding of the transmission of culture. Technological pedagogical content knowledge (TPCK) reflects a new direction in understanding the complex interactions among content, pedagogy, learners and technology that can result in successful integration of multiple technologies in teaching and

learning. The purpose of this edited volume is to introduce TPCK as a conceptual framework for grounding research in the area of teachers' cognitive understanding of the interactions of technology with content, pedagogy and learner conceptions.

Accordingly, the contributions will constitute systematic research efforts that use TPCK to develop lines of educational technology research exemplifying current theoretical conceptions of TPCK and methodological and pedagogical approaches of how to develop and assess TPCK.

*invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable*

*to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L. Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.*
