**In a landmark study published two years ago, the Australian researchers asked patients with IBS to remove FODMAPs from their diet. They found 74 per cent reported that their symptoms, such as bloating, abdominal pain, gas, excessive burping, diarrhoea and constipation, had improved dramatically. The findings so impressed gastroenterologists at King's College London that they adapted the diet for the UK and many British patients are on the Low FODMAP diet. At first glance, the Low FODMAP diet may appear daunting, as it involves cutting out all five families of fermentable carbohydrates: Fructans (wheat, rye, onions, garlic and various other grains and vegetables), Galacto oligosaccharides (beans and pulses), Polyols (certain fruit, sugar-free gum and mints), Fructose (various fruits, honey and agave nectar) and Lactose (animal milks, yogurts and some cheeses). However, this book gives practical guidance on how to follow the regime while ensuring a balanced, nutrient rich diet, transforming the Low FODMAP diet from a seeming mountain of restrictions to something you can follow easily and with pleasure while your digestive symptoms diminish (or even completely resolve). Whether you need quick and easy meals to prepare or you enjoy the art of cooking a dinner-party-worthy dish, this book will guide you step by step... meaning you can have your cake and eat it (literally!).**

The Complete Low-FODMAP Diet (cowritten by Sue Shepherd) introduced this revolutionary treatment, which is rapidly becoming the first-line recommendation by doctors and dietitians worldwide. FODMAP is an acronym that stands for a group of difficult-to-digest carbohydrates found in foods such as wheat, milk, beans, soy, and some fruits, vegetables, nuts, and sweeteners. **as bloating, gas, and constipation. But its true power lies in its ability to heal IBS, one of the most widespread gastrointestinal disorders. Research conducted by Clinical and Experimental Gastroenterology found that 86% of tested subjects with IBS saw improvements in their symptoms while on a low FODMAP diet. Another study reported that people also felt relief from abdominal pain, bloating, stool consistency, and flatulence. There's no doubt that the low-FODMAP diet can work wonders. But people still hate it. Part of the reason lies in the diet's semi-extreme restrictiveness: A LOT of foods are strictly forbidden when following this regime. Most people somehow get over the fact that they have to give up so many of their favorite foods but get stuck on the next challenge. We're talking of course about preparing and cooking meals with such a limited amount of ingredients. Creating new recipes is very time-consuming, and you can't just copy "normal" recipes and replace the high-FODMAPs in them with their healthier versions. This has caused many to give up on this diet, even though it has the potential to cure all their digestive issues. Fortunately, you don't have to be one of them. You can now have your cake and eat it too.
