Cormen, Thomas H ... Introduction to Algorithms grew out of a course of the same name, known as 6.046 in MIT's course-numbering system. Responsibility for teaching the course rotated among professors in the then-Department of Computer Science, who shared and expanded a set of lecture notes, which were further organized and expanded by teaching assistants who transcribed their lectures.

Introduction to Algorithms uniquely combines rigor and comprehensiveness. The book covers a broad range of algorithms in depth, yet makes their design and analysis accessible to all levels of readers. Each chapter is relatively self-contained and can be used as a unit of study.
